

## AN ETHNOBOTANICAL STUDY IN ÇATALCA (EUROPEAN PART OF ISTANBUL) II

Gülay ECEVİT GENÇ\*, Neriman ÖZHATAY

İstanbul University, Faculty of Pharmacy, Department of Pharmaceutical Botany  
34416 Beyazıt, İstanbul, TURKEY

### Abstract

In this study, sixty-eight flowering plant species used as medicinal treatment in Çatalca (European part of Istanbul) are reported. Among them fifty-eight species are wild and the rest ten species are cultivated plants. The plants in this research are mostly used for treatment of stomach and kidney ailments, cough, diabetes, inflammation and rheumatism. Data presented are based on interviews of local people and materials collected in the area surveyed. Researchers interviewed local people and all the specimens collected together with them were identified and prepared voucher specimens were deposited in the Herbarium of the Faculty of Pharmacy, İstanbul University (ISTE).

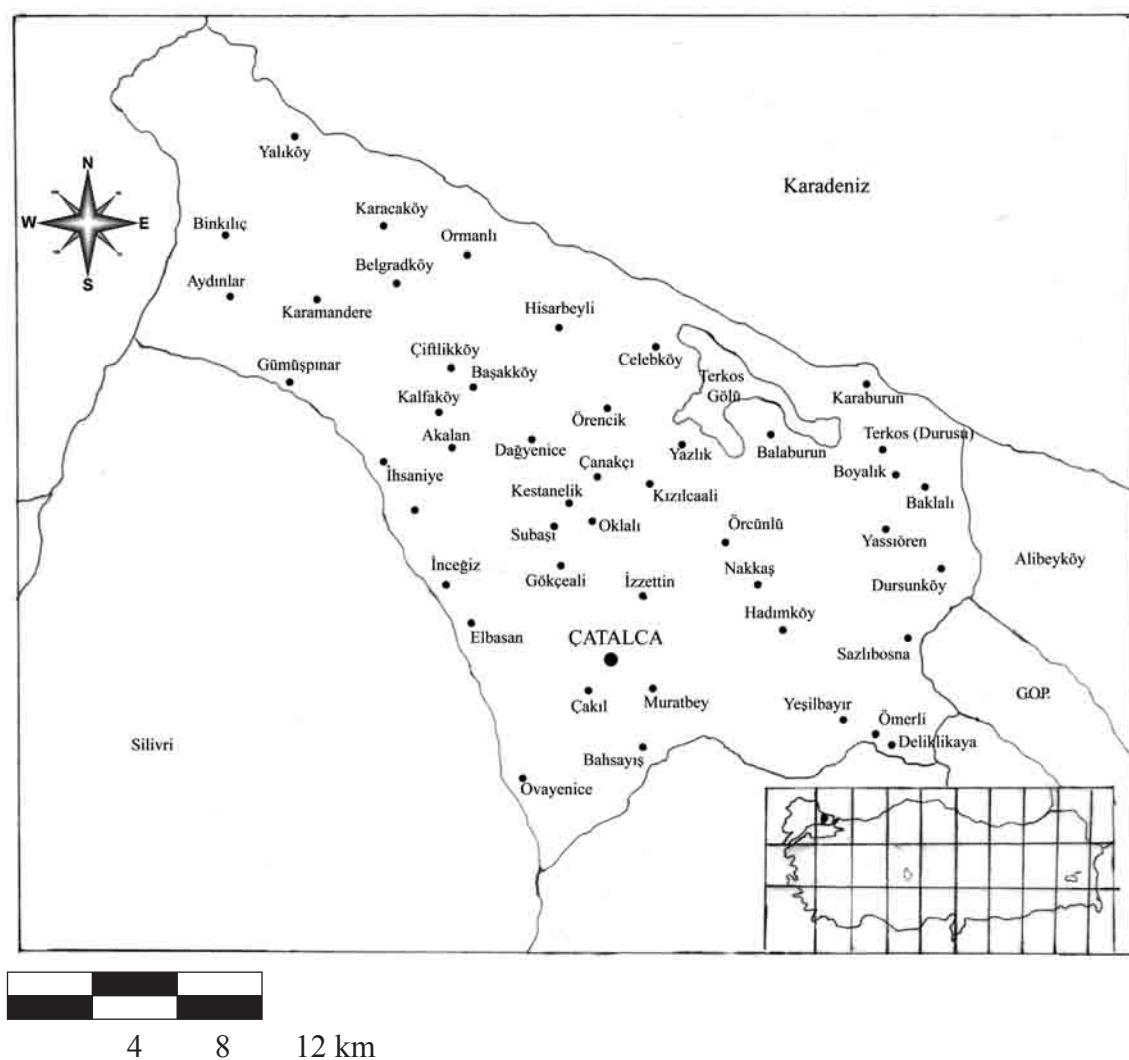

**Keywords:** Traditional medicine, Çatalca, İstanbul

### Çatalca'dan (İstanbul, Avrupa Yakası) Etnobotanik Bir Çalışma II

Bu çalışmada, Çatalca (İstanbul, Avrupa yakası) yöresinde tıbbi amaçla kullanılan altmış-sekiz çiçekli bitki türü kaydedilmiştir. Bu bitkilerden elli-sekiz tanesi doğal tür, geri kalanlar ise kültürü yapılan bitkilerdir. Araştırma alanındaki bitkiler çoğunlukla mide ve böbrek hastalıkları, öksürük, şeker hastalığı, iltihap ve romatizma tedavisinde kullanılmaktadır. Sunulan veriler bizzat yapılan arazi çalışmaları ve yöre halkından elde edilen bilgilerin derlenmesiyle hazırlanmıştır. Yöre halkı ile bizzat konuşulmuş, onlarla birlikte topladığımız örnekler bilimsel olarak teşhis edilmiş ve herbaryum örneği haline getirilerek İstanbul Üniversitesi Eczacılık Fakültesi Herbaryumu'nda (ISTE) saklanmaktadır.

**Anahtar kelimeler:** Geleneksel tıp, Çatalca, İstanbul

**Figure 1:** Study area: Çatalca [A2(E) Istanbul] District: (Inset: Map showing the location of Çatalca in Turkey)

## INTRODUCTION

This is second part of the study carried out in Çatalca point of the view of ethnobotanical aspect and in this paper only medicinal uses are reported. Çatalca is situated in European part of Istanbul the north-west of Turkey and has an area of 1500 km<sup>2</sup> (Figure 1). Its population is about 81223 according to the state population in 2002. The majority of the population consists of immigrants from the Balkans. It has 6 sub-districts and 43 villages. The highest hill (Ferah Tepe) in the area is 382 m high (1,2).

According to the study titled "Flora of Çatalca and Its Environs" (3) recently carried out, the number of endemic taxa found in the area is 7, which corresponds to 1.64% of the total number of species. Of the 444 taxa of flora 20.9% are Mediterranean, 19.4% are Euro-Siberean and 0.5% are Irano-Turanian elements. The remaining 263 species 59.2% could either be found in more than one area or their phytogeographic area is unknown. The greatest three families on the basis of species rate are Asteraceae (60 taxa), Fabaceae (49 taxa), Lamiaceae (25 taxa).

There is no previous study about the ethnobotanical point of view plants of Çatalca and therefore this is the first comprehensive investigation on this area.

## EXPERIMENTAL

The information, including the various data [local names, plant part used, uses, preparation, administration, dosage, duration of the treatment] were obtained from local people by personal interviews carried out between June 2002 to June 2003 while collecting plant specimens. In addition, some harmful effects of folk medicine, if declared, were also recorded.

The recorded species were collected by the author and taxonomically identified according to Flora of Turkey and the East Aegean Islands (4, 5). The herbarium specimens of all the described taxa are deposited in the Herbarium of the Faculty of Pharmacy, Istanbul University (ISTE).

During the field works, all the settlements (43 villages) were visited (Map 1). They are listed below, with a reference number. This number cited in the parenthesis in the Table 1 in the column uses.

1. AhmedİYE; 2. Akalan; 3. Aydınlar; 4. Bahsayış; 5. Baklalı; 6. Başakköy; 7. Belgradköy; 8. Binkılıç; 9. Boyalık; 10. Celebköy; 11. Çakıl; 12. Çiftlikköy; 13. Dağyenice; 14. Deliklikaya; 15. Dursunköy; 16. Durusu; 17. Elbasan; 18. Gökçeali; 19. Gümüşpinar; 20. Hadımköy; 21. Hisarbeyli; 22. İhsaniye; 23. İncegiz; 24. İzzettin; 25. Kabakça; 26. Kalfaköy; 27. Karacaköy; 28. Karamandere; 29. Kestanelik; 30. Merkez; 31. Muratbey; 32. Nakkaş; 33. Oklalı; 34. Ormanlı; 35. Ovayenice; 36. Ömerli; 37. Örencik; 38. Örcünlü; 39. Subaşı; 40. Yalıköy; 41. Yassıören; 42. Yazlık; 43. Yeşilbayır.

## RESULT AND DISCUSSION

The species used as medicinal purpose in Çatalca [A(2) E İstanbul] are presented in Table 1, arranged in alphabetical order of species Latin names.

Some of these plants are also used in multiherbal recipes containing two or three species which are presented in Table 2.

During the field works 125 specimens were collected from the area. According to the results of the identifications 68 species are being used as medicinal purposes in Çatalca. Among them 58 species are wild and 10 species are cultivated plants.

As a result of this study, 72 different uses (including 7 multiherbal repices) belonging to 68 species have been recorded.

Among the recorded species, *Arum italicum*, *Cotinus coggyria*, *Crataegus monogyna* subsp. *monogyna*, *Cydonia oblonga*, *Ecballium elaterium*, *Ficus carica* subsp. *carica*, *Hypericum perforatum*, *Juglans regia*, *Laurus nobilis*, *Malva sylvestris*, *Mentha pulegium*, *Plantago lanceolata*, *Plantago major* subsp. *major*, *Prunus spinosa* subsp. *dasyphylla*, *Rosa canina*, *Rubus sanctus*, *Sambucus ebulus*, *Sambucus nigra*, *Sinapis arvensis*, *Thymus sibthorpii*, *Tilia argentea*, *Urtica dioica* are the most popular plants used in the treatment of many ailments. They are mostly used for the treatment of stomach and kidney ailments, cough, diabetes, rheumatism and inflammation.

Most of the interviewers stated that they have learned the usage of these medicinal plants from their parents and elderly relatives.

Local people used different parts of the plant species to prepare traditional medicines. The most frequently used parts were aerial parts, leaves, fruits, flowers and bracts, seeds, but roots and bulbs were also used for many of the remedies. Sometimes the local people also used other ingredients, such as sugar, honey, lemon to prepare the remedies.

Decoction and infusion are the methods mostly used for the preparation of the folk medicines.

Some different plant species which are known with the same vernacular name (*Mentha pulegium*, *Origanum vulgare* subsp. *vulgare*: kırcayı; *Anthemis chia*, *Bellis perennis*, *Crepis vesicaria*: papatya; *Cirsium creticum* subsp. *creticum*, *Eryngium campestre* var. *virens*: Yıldız otu) are used for the treatment of similar or different diseases.

*Cotinus coggyria*, *Helleborus orientalis*, *Sambucus ebulus* are used not only in human but also in animal treatment while *Calamintha nepeta* subsp. *glandulosa* and *Conium maculatum* are only in animal treatment.

Usage of *Conium maculatum*, *Datura stramonium*, *Ecballium elaterium* requires caution since overdosage can be dangerous according to patients' experience.

<i>Thymus sibthorpii</i> Bentham Lamiaceae ISTE 80613	Kekik, keklik otu	Aerial parts	Stomachache (40) Prostatic hypertrophy (40) Kidney stones (40) Anti-dandruff (27)	Infusion, int. Infusion, int. Decoction, int. Boiled in water, ext.
<i>Thymus zygoides</i> Griseb. var. <i>zygoides</i> Lamiaceae ISTE 80756	Kekik	Aerial parts	Diabetes (23)	Infusion, int.
<i>Ulmus minor</i> Miller subsp. <i>minor</i> Ulmaceae ISTE 80620, ISTE 80630	Karaağaç	Flowers Bark Roots	Cut (8) Cut (8) Wounds (for animals) (8)	Decoction, ext. Decoction, ext. Decoction, ext.
<i>Tilia argentea</i> Desf. Tiliaceae ISTE 80640, ISTE 80733	İhlamur	Flowers and bracts	Expectorant (3, 17, 24) Sedative (23) Cold (10, 22) Influenza (+lemon) (21) Rheumatism (for babies) (22)	Infusion, int. Boiled in water, ext. Infusion, int. Infusion, int. Heated, ext. Infusion, int.

Table 1. (continued)

Botanical name, family, voucher number	Local names	Plant part used	Uses (village number which their names given in the text page 3)	Preparation, administration, dosage, duration of the treatment
<i>Urtica dioica</i> L. Urticaceae ISTE 80618, ISTE 80716	Isurgan, surgan	Leaves	Stomachache (5, 11, 8) Anticoagulant (33) Cold (8) Goiter (30) Women's diseases Gall bladder, stones and sands (8) Rheumatism (11, 14, 33) Hair restorer (30) Rheumatism (11, 22) Cardiac diseases (8, 30) Itching (33)	Decoction, int., (with honey) Decoction, int. Decoction, int., (with dried leaves) Decoction, int. Decoction, int. Int., used cold., (with yoghurt) Rubbed, (with fresh leaves) Decoction, ext. Decoction, int. Decoction, int. Decoction, ext., 1 week
<i>Viscum album</i> L. subsp. <i>album</i> Loranthaceae ISTE 80617	Burg, çekem, gevele, gökçe otu, ökse otu	Branches	Antihypertensive (27) Asthma (8) Cardiac diseases (8)	Decoction, int., 2 x 1 Decoction, int. Decoction, int.

\* , cultivated plant; +, mi  $\square$   
of decoction or infusion, unless otherwise (e.g. spoonful, piece, drop] indicated.

**Table 2.** Multitherbal recipes used as folk medicine in Çatalca (İstanbul, Turkey)

<b>Botanical name</b>	<b>Plant part used</b>	<b>Uses (village number which their names given in the text page 3))</b>	<b>Preparation, administration, duration of the treatment</b>
<i>Cotinus coggyria</i>	Leaves	Stomachache (8)	Infusion, int.
<i>Tilia argentea</i>	Flowers and bracts		
<i>Bellis perennis</i>	Capitulum	Cough (30)	Infusion, int.
<i>Tilia argentea</i>	Flowers and bracts		
<i>Sinapis arvensis</i>	Rheumatism	Rheumatism (13)	Poultice, ext., wrapped in a cloth
<i>Juglans regia</i>	Leaves		
<i>Mentha pulegium</i>	Aerial parts	Cold (40)	Infusion, int.
<i>Rosa canina</i>	Fruits		
<i>Tilia argentea</i>	Flowers and bracts		
<i>Laurus nobilis</i>	Flowers	Sedative (27)	Boiled in water, ext.
<i>Thymus sibthorpii</i>	Aerial parts		
<i>Rosa canina</i>	Fruits	Cold (23, 40)	Infusion, int.
<i>Tilia argentea</i>	Flowers and bracts		
<i>Urtica dioica</i>	Seeds	Leukemia (8)	Int. (with honey)
<i>Corylus avellana</i>	Seeds		

Ext., external use; Int., internal use

## ACKNOWLEDGEMENT

This research supported by the Research Fund of Istanbul University (Project number: T 1175). Thanks due to all interviewers who participated in this survey by providing information.
